Section	**Page**	**Figure Table**

Category Name   Requirements   **Actionee**   HAIS

Sub Category

Subject   Capability for the IST to initiate unix shell commands.

Description of Problem or Suggestion:

The IST now has the capability to generate "carry out" data on a regular basis though the use of "standing orders". However, there is no simple method to trigger custom, automated analysis on this data such as giving the ability to the IST to generate a unix shell command to initiate a script or application to operate on "carry out" data,

Originator's Recommendation

I would suggest giving the IST the ability to produce unix shell commands. This would open up a world of automation capabilities to IST users who will not be "round the clock" users like those of the EOC. It would be an enabling technology for the instrument teams to use to reduce ops costs.

Agree. We have added UNIX commands as allowable command directives (see requirement F-FUI-01590). The details of the design will be available at CDR.
